Cleaning Solutions

For perfect hygiene in the healthcare sector

Hygiene requirements in the healthcare sector are particularly high, while space and time are scarce commodities given the hectic work routine in hospitals.

Hako meets these requirements by offering compact, highly maneuverable and low-noise machines that provide superior cleaning of surgeries, hospital rooms, sanitary facilities, hallways and kitchens, without interrupting clinical operations. In addition, Hako offers efficient solutions for work that needs carrying out in the outdoor areas of clinics and hospitals.

Economically efficient working – ensured by a superior cleaning performance, highly maneuverable machines and excellent quality “made in Germany” – always enjoys top priority.

- ✓ Comfortable operation, a very good view onto the working area and the ergonomic design of our machines ensure optimal working conditions
- ✓ Hako-AntiBac®: Impeccably clean floors in hygiene-sensitive areas. Inhibits fungal and bacterial growth.
- ✓ Hako-Daytime Cleaning: Quick-charge technology provides extended runtimes at reduced capacity, and allows interim charging at any 230-V power outlet
- ✓ Developed for the highest hygiene standards in hospitals and healthcare facilities

Hako Australia Services

Customer Service

We have factory trained service technicians with fully equipped service vehicles to enable onsite servicing so you can get back to using your Hako equipment ASAP.

Product Enquiry

Request a demo: If you want to see for yourself how well a Hako machine will clean your floor, we are happy to provide a free demonstration.

Technical Support

We have a dedicated team of technical support personnel to help you with your technical needs.

When submitting your inquiry if you have the machine details, it will help us to prepare before we speak to you.

Spare parts

We average a same day dispatch rate of 91% of parts when orders are placed before 10am.

Rentals

Quick availability for short term rental of cleaning equipment (1 day to 3 month periods).

We have an extensive fleet of walk behind and ride-on equipment available for your cleaning needs. Call us for availability and rental rates Australia wide.

Environmental Protection

Hako: Our commitment in terms of sustainability and environmental protection

Everything we do has an impact on the environment and therefore on our future. This is why, with each and any of our activities, we focus on protecting the environment: from selecting the materials to sustainable development processes and the resource-saving production of our machines.

Eco-friendly use is one of our top priorities when developing our machines, which means, for example, that we focus on developing efficient solutions with a long service life and low consumption of cleaning detergents. And our customers benefit from our machines' superior economic efficiency.

Hako-AquaForce®

Chemical-free cleaning: with demineralised water that solves and removes dirt easier and reduces re-soiling without the need for expensive cleaning chemicals.

Hako-AntiBac®

This fungus and bacteria-inhibiting feature for the solution and recovery tanks of scrubber-driers provides improved hygiene and reduces both odour development and costs, due to a lower consumption of disinfectants.

Hako-AquaControl

Saves up to 50% of water when working with scrubber-driers: thanks to intelligent brush systems and an automatic water stop function when the machine stands still.

Hako-LessChem

Saves cleaning detergents and protects the environment: Hako's dosing and filling systems for scrubber-driers prevent incorrect dosing and guarantee reliably good cleaning results with only small amounts of chemicals.

Thank you
